

## **PULL UP ON THE RIGHT**

During the whole manouvre remember to keep good observations, and stop if other traffic or road users increase the risk.

- 1. Indentify a space on the Right Hand Side (RHS) of the road to pull up and stop.
- 2. Use MSM to position close to the centre of the road and hold here if there are oncoming vehicles. If safe move straight towards the RHS curb.
- 3. Pull up along side the curb (about 6-10inchs) away, and parallel.
- 4. Select reverse gear, observe around the car, and reverse straight for approx THREE car lengths and STOP, remembering to react safely to other road users whilst reversing.
- 5. Fully observe around for traffic traveling in both directions, and in a suitable gap, move away back to the LHS of the road and continue with the traffic flow as normal.

Reference points given above are for a *Ford Fiesta 2024*. These points may need adjusting when parking a different vehicle.
