

REVERSE BAY PARK(RHS)

During the whole manoeuvre remember to keep good observations, and stop if other traffic or road users increase the risk.

1. Drive along side the spaces leaving a car width between you and the edge of the spaces
2. Line up the middle of the drivers side window with the parking line two spaces forward of the space you wish to reverse into.
3. Select Reverse, observe again. Move the car slowly and then quickly apply full steering to the right.
4. As you get closer to your space spot the parking bay lines in the door mirrors.
5. Continue to reverse slowly until the car draws parallel with the parking bay lines. You may need to adjust the steering slightly left or right to ensure you enter the centre of the space.
6. Once straight look over your left shoulder and into the rear passenger window. Continue slowly until the curb edge matches up near the bottom corner of the window. Your car should now be about 30cm from the back of the space.

REMEMBER, WHILST REVERSING CONTINUE TO MAKE ALL ROUND OBSERVATIONS FOR HAZARDS BEHIND AND DOWN THE SIDES OF YOUR CAR. STOP IF YOU ARE UNSURE OF YOUR POSITION AND MAKE FURTHER CHECKS

Reference points given above are for a **Ford Fiesta 2024**. These points may need adjusting when parking a different vehicle.
